

<code>cd ::= class C extends D { \overline{fd}; \overline{kd} \overline{md} }</code>	class
<code>fd ::= q C f</code>	field
<code>kd ::= q C (t C g, t C f) { <u>super(g)</u>; this.f = f; };</code>	constructor
<code>md ::= t C m (t C this, t C x) { t C y s; return z }</code>	instance method
<code>e ::= x x.f</code>	expression
<code>s ::= x = e x.f = y x = y.m(z) super(g) x = new t() s;s</code>	statement
<code>t ::= k q</code>	qualifier type
<code>k ::= initialized underinitialized unknowninitialized</code>	initialization qualifier
<code>q ::= readonly polyimmutable mutable immutable</code>	immutability qualifier

Each class has only one constructor. But it doesn't affect the generality.

Type Hierarchy

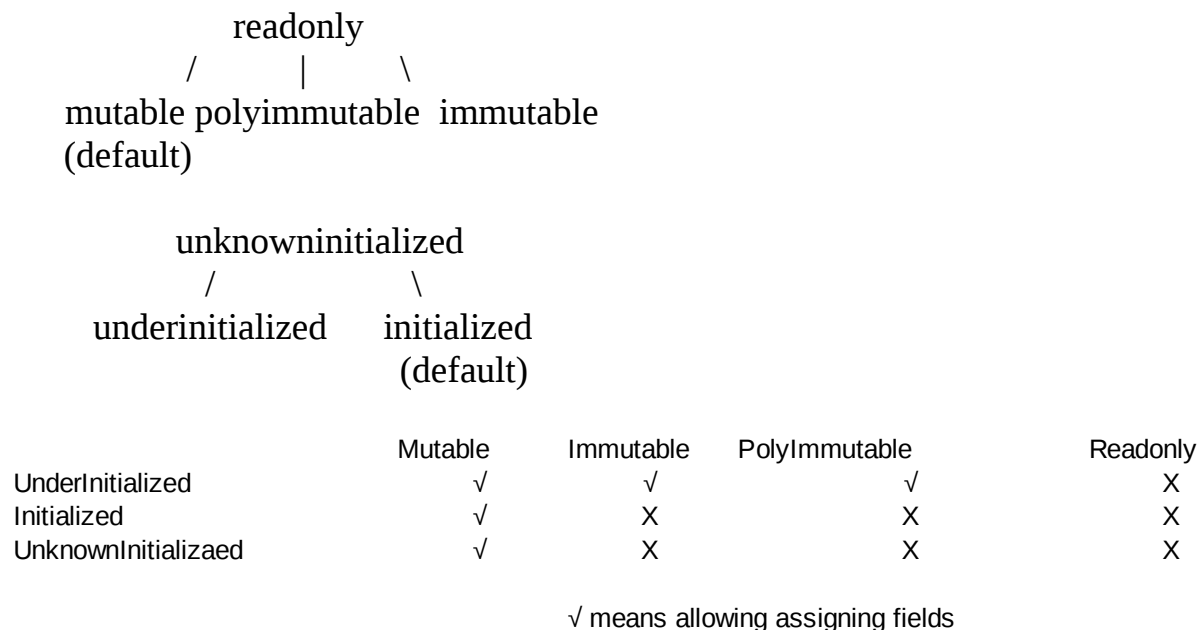

Figure 1 Combination of qulifiers. Two qualifier hierarchies are orthogonal. If an object is under initialization, its immutability guarantee is not satisfied. So even immutable and polyimmutable objects can also be modified when under initialization.

We don't have readonly objects, so there is no need to initialize readonly objects.

Therefore, readonly doesn't have such exception when under initialization.

Subtype relations:

$$k_1 \ q_1 <: k_2 \ q_2 \iff k_1 <: k_2 \ \wedge \ q_1 <: q_2$$

Helper Functions

$$q \in C$$

$$fType(f) = q$$

Note: No initialization modifier on field declarations. The field is unique within the whole class hierarchy.

fields(C) returns all fields declared in C.

cBody(kd) returns constructor body of kd.

mBody(md) returns method body of md.

Viewpoint Adaptation Rules

$_ \triangleright \text{mutable} = \text{mutable}$

$_ \triangleright \text{readonly} = \text{readonly}$

$_ \triangleright \text{immutable} = \text{immutable}$

$q \triangleright \text{polyimmutable} = q$

Special Rules

- Forbid mutable fields, readonly constructor return type and readonly instantiation of objects
- In constructor, $q_{\text{this}} = q_{\text{ret}}$
- Forbid initialization modifier on fields, constructor return type and new statement

Typing Rules

$$x \in \Gamma$$

(T-VAR)

$$\Gamma \vdash x : \Gamma(x)$$

$$\Gamma(x) = k_x q_x \quad fType(f) = q_f \quad q = q_x \triangleright q_f$$

$$k = \begin{cases} \text{initialized} & \text{if } k_x = \text{initialized} \\ \text{unknowninitialized} & \text{otherwise} \end{cases}$$

(T-FLD)

$$\Gamma \vdash x.f : k q$$

Figure 2 Expression typing

$$\Gamma \vdash e = t_e \quad t_e <: \Gamma(x)$$

(T-VARASS)

$$\Gamma \vdash x = e$$

$$\begin{aligned} &\Gamma(x) = k_x q_x \quad \Gamma(y) = k_y q_y \quad \text{typeof}(f) = q_f \\ &q_x = \text{mutable } \mathbf{V} \\ &(k_x = \text{underinitialized} \wedge q_x = \text{immutable}) \vee \\ &(k_x = \text{underinitialized} \wedge q_x = \text{polyimmutable}) \\ &q_y <: q_x \triangleright q_f \\ &k_x = \text{underinitialized} \vee k_y = \text{initialized} \end{aligned}$$

(T-FLDASS)

$$\Gamma \vdash x.f = y$$

$$\begin{aligned} &\Gamma(x) = k_x q_x \quad \Gamma(y) = k_y q_y \quad \Gamma(\bar{z}) = \bar{k}_z \bar{q}_z \quad \text{typeof}(md) = k_{\text{this}} q_{\text{this}}, \bar{k}_p \bar{q}_p \rightarrow k_{\text{ret}} q_{\text{ret}} \\ &k_y <: k_{\text{this}} \quad \bar{k}_z <: \bar{k}_p \quad k_{\text{ret}} <: k_x \\ &q_y <: q_y \triangleright q_{\text{this}} \quad \bar{q}_z <: q_y \triangleright \bar{q}_p \quad q_y \triangleright q_{\text{ret}} <: q_x \end{aligned}$$

(T-CALL)

$$\Gamma \vdash x = y.m(\bar{z})$$

$$\begin{aligned} &k_d \text{ in } C \quad C <: D \quad \text{typeof}(D) = \bar{k}_{p-D} \bar{q}_{p-D} \rightarrow \bar{q}_{\text{ret-D}} \quad \text{typeof}(k_d) = \bar{\bar{}} \rightarrow q_{\text{ret-C}} \\ &\Gamma(z) = k_z q_z \quad q_{\text{ret-C}} <: q_{\text{ret-C}} \triangleright q_{\text{ret-D}} \quad \bar{q}_z <: q_{\text{ret-C}} \triangleright \bar{q}_{p-D} \quad \bar{k}_z <: \bar{k}_{p-D} \end{aligned}$$

(T-SUPER)

$$\Gamma \vdash \text{super}(\bar{z}) \text{ in } k_d$$

$$\begin{array}{l} \Gamma(\underline{x}) = \underline{k}_x \ \underline{q}_x \quad \Gamma(\bar{y}) = \bar{k}_y \ \bar{q}_y \quad \text{typeof}(C) = \bar{k}_p \ \bar{q}_p \rightarrow q_{\text{ret}} \\ \underline{q}_y <: \underline{q} \triangleright \underline{q}_p \quad \underline{q} <: \underline{q} \triangleright q_{\text{ret}} \quad q = \text{mutable} \vee q = \text{immutable} \vee q = \text{polyimmutable} \end{array}$$

$$\bar{k}_y <: \bar{k}_p$$

$$\underline{q} <: \underline{q}_x \quad \underline{k} <: \underline{k}_x \quad \underline{k} = \begin{cases} \text{initialized} & \text{if } \bar{k}_p = \text{initialized} \\ \text{underinitialized} & \text{otherwise} \end{cases}$$

$$\Gamma \vdash x = \text{new } q \ C(\bar{y})$$

(T-NEW)

$$\Gamma \vdash s_1 \quad \Gamma \vdash s_2$$

$$\Gamma \vdash s_1; s_2$$

(T-SEQ)

Figure 3 Statement typing

Well-formdness Rules

$$\text{fType}(f) \neq \text{mutable} \quad C <: D \quad f \notin \text{fields}(D)$$

$$\vdash_C f \text{ is OK}$$

(WF-FLD)

$$\vdash_{\text{object}} kd \text{ is OK}$$

(WF-CONS-OBJECT)

$$\begin{array}{l} \text{cBody}(kd) = \text{super}(g); s \quad \text{typeof}(kd) = \bar{k}_p \ \bar{q}_p \rightarrow q_{\text{ret}} \quad q_{\text{ret}} \neq \text{readonly} \\ \Gamma = (\text{this} : \text{underinitialized } q_{\text{ret}}, \ p : \bar{k}_p \ \bar{q}_p, \ y : \bar{k}_{\text{local}} \ \bar{q}_{\text{local}}) \quad \Gamma \vdash \text{super}(\bar{y}) \text{ in } kd \quad \Gamma \vdash s \\ \bar{q}_p = \begin{cases} \text{polyimmutable or immutable} & \text{if } q_{\text{ret}} = \text{polyimmutable or } q_{\text{ret}} = \text{immutable} \\ _ & \text{otherwise} \end{cases} \end{array}$$

$$\vdash_C kd \text{ is OK}$$

(WF-CONS)

Note: $\vdash_C kd$ reads “constructor kd in class C is well-formed”.

Only allowing polyimmutable and immutable constructor parameter types in polyimmutable and immutable constructor allows readonly field to be safe, i.e., no aliased mutable objects will be captured by readonly fields of an immutable object and break the immutability contract.

$$\begin{array}{c}
 \text{mBody}(\underline{\text{md}}) = \text{s}; \text{return } \underline{z} \quad \text{typeof}(\underline{\text{md}}) = \text{k}_{\text{this}} \text{ q}_{\text{this}}, \bar{\text{k}}_{\text{p}} \bar{\text{q}}_{\text{p}} \rightarrow \text{t}_{\text{ret}} \\
 \Gamma = (\text{this} : \text{k}_{\text{this}} \text{ q}_{\text{this}}, \bar{\text{p}} : \bar{\text{k}}_{\text{p}} \bar{\text{q}}_{\text{p}}, \bar{\text{y}} : \bar{\text{k}}_{\text{local}} \bar{\text{q}}_{\text{local}}) \quad \Gamma \vdash \text{s} \quad \Gamma(\underline{z}) <: \text{t}_{\text{ret}} \\
 \hline
 \vdash \underline{\text{md}} \text{ is OK} \qquad \qquad \qquad \text{(WF-METH)}
 \end{array}$$

$$\begin{array}{c}
